The Olympic Delivery Authority has the challenge of meeting planning conditions which include sustainability targets. These were incorporated by the Olympic Delivery Authority in its Energy Strategy, which includes a target to reduce CO\textsubscript{2} emissions by 50% compared with those which would be expected in complying with 2006 Building Regulations.

The Olympic Park and District Energy Infrastructure

The Legacy Developments and Wider Opportunities

The Olympic Delivery Authority has ensured that the site’s low carbon energy supplies can continue to benefit the local area long into the future, granting a 40 year concession for the operation of the district energy scheme.

Projected annual heat consumption

The District Energy Network is “fuel agnostic”: New sources of low carbon heat and cooling can be added as they become financially viable & technologically mature

Space for future plant has been designed into the energy centres.
