

“Unleash the unconventional: from game engine to co-simulation platforms for building performance analyses”

ARUP

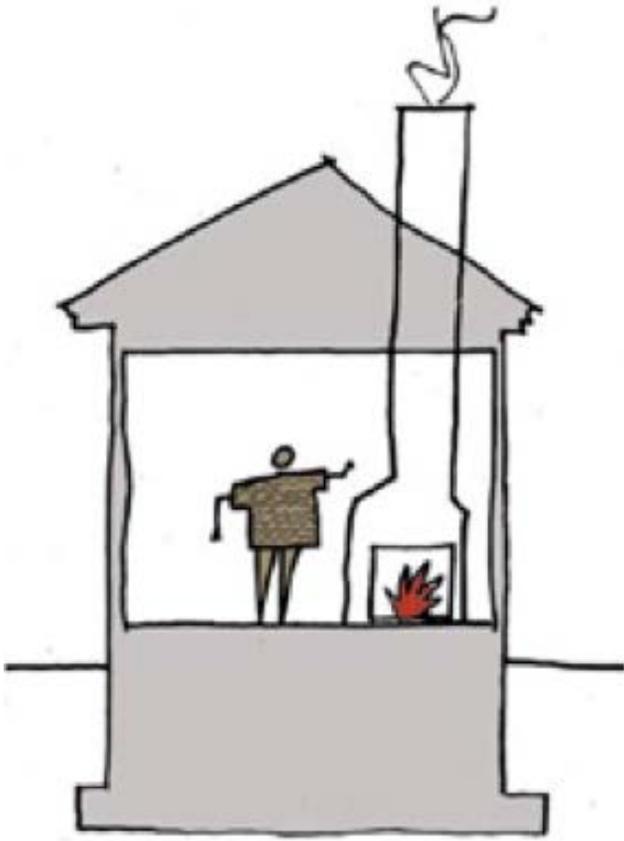

Index of the presentation

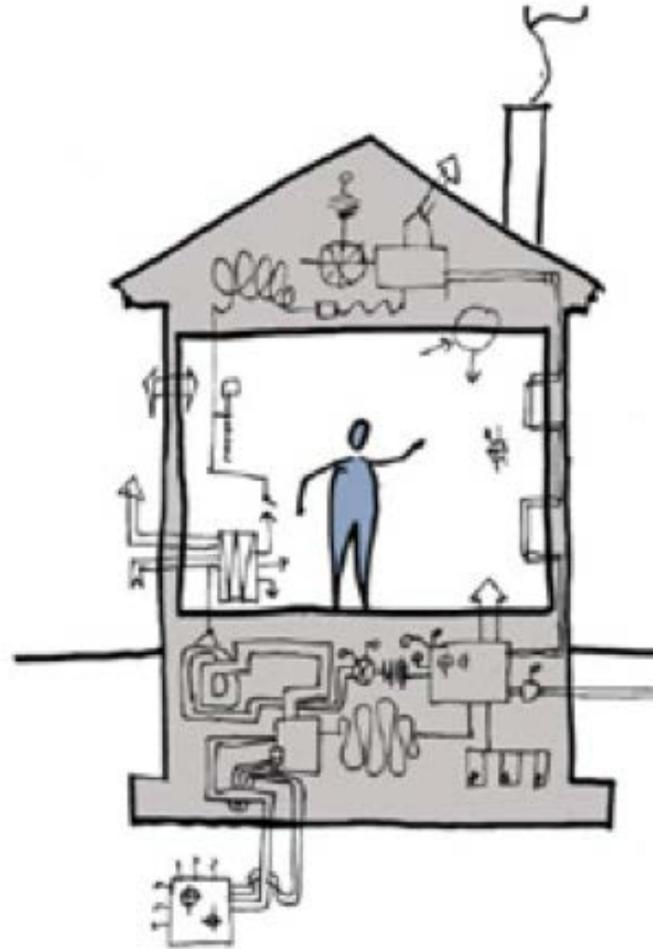

1. Game engines for building services design
 - Background
 - Arup Solar
2. Co-simulation platforms for building performance analyses
 - Background
 - Dymola
3. Q&A

Co-simulation platforms for building performance analyses

ARUP

PhD student Esther Borkowski

Co-simulation platforms for building performance analyses

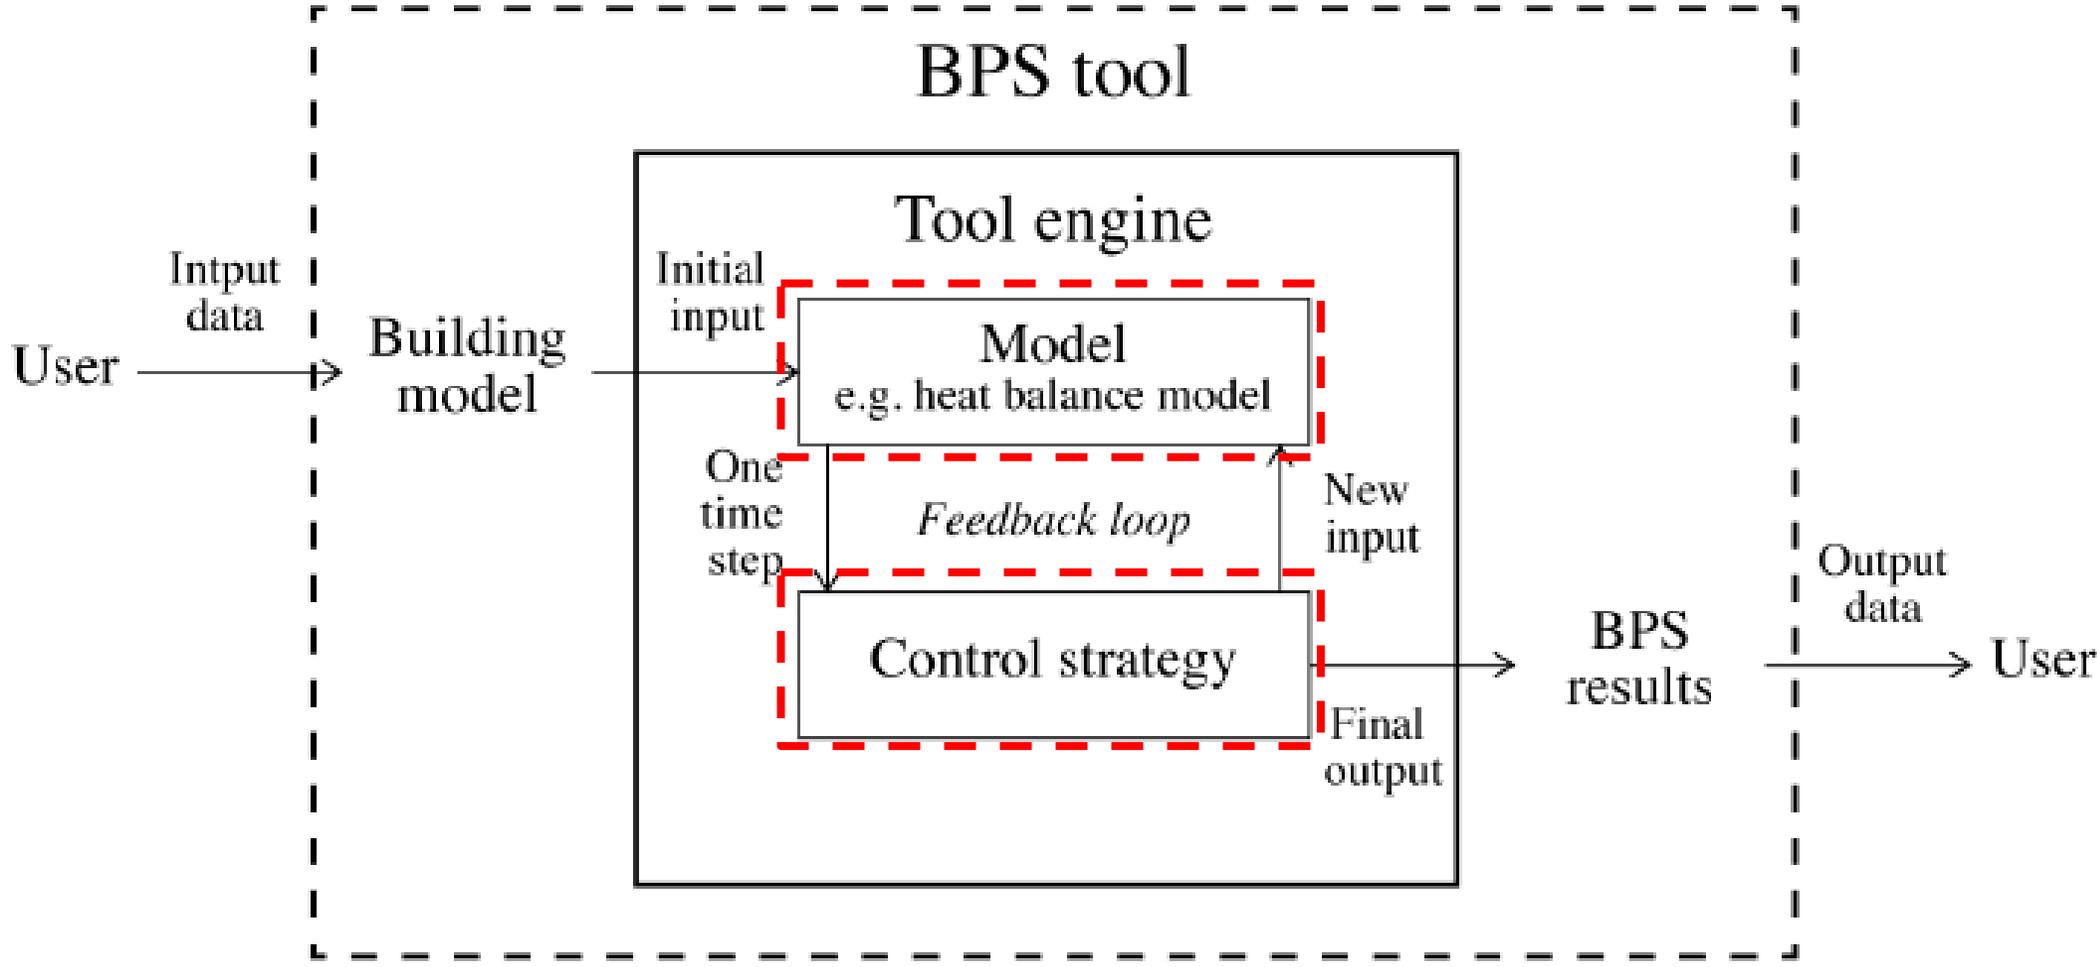

Co-simulation platforms for building performance analyses

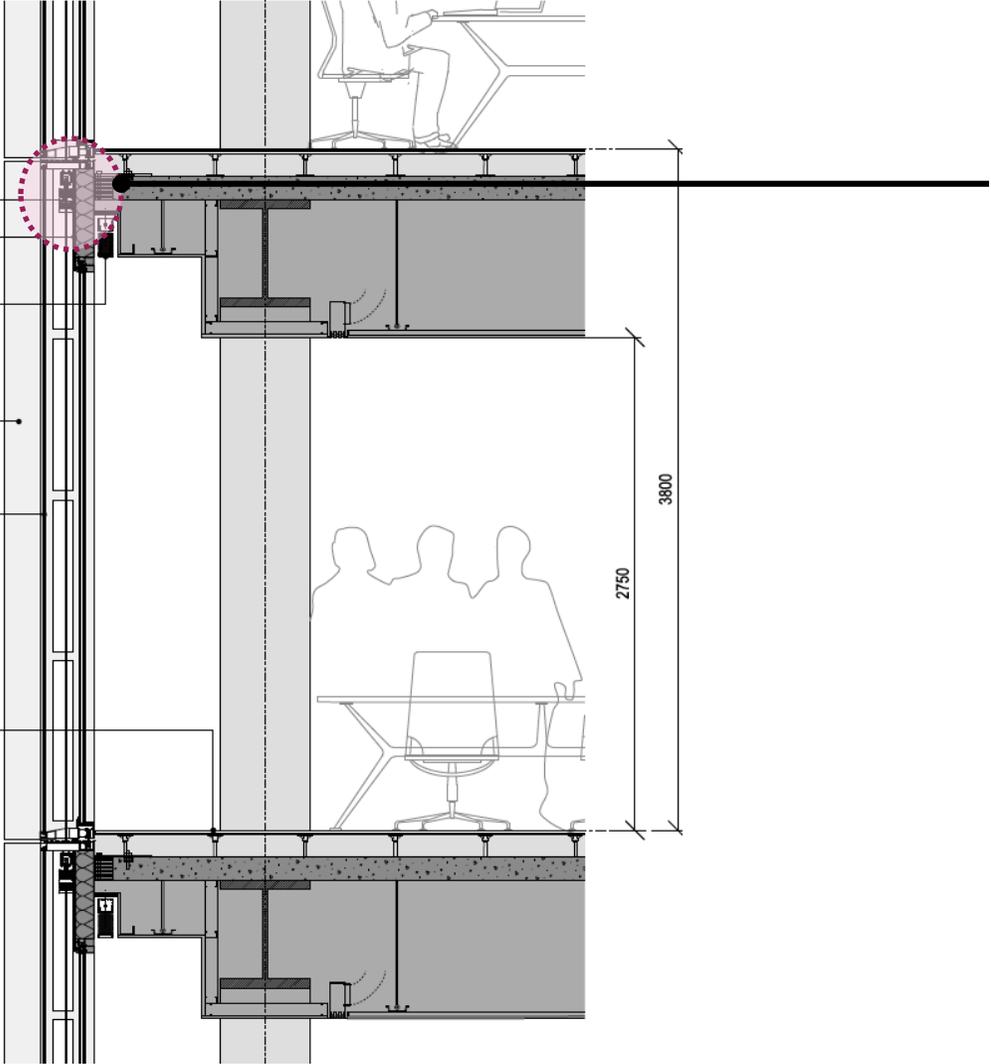

Why using them?

- **Decomposition of the design**, the design is decomposed into individual functional or logical components
- **Hierarchical modelling**, components may internally consist of other connected components
- **Component libraries**, ready-to-use equation-based model components from various application areas

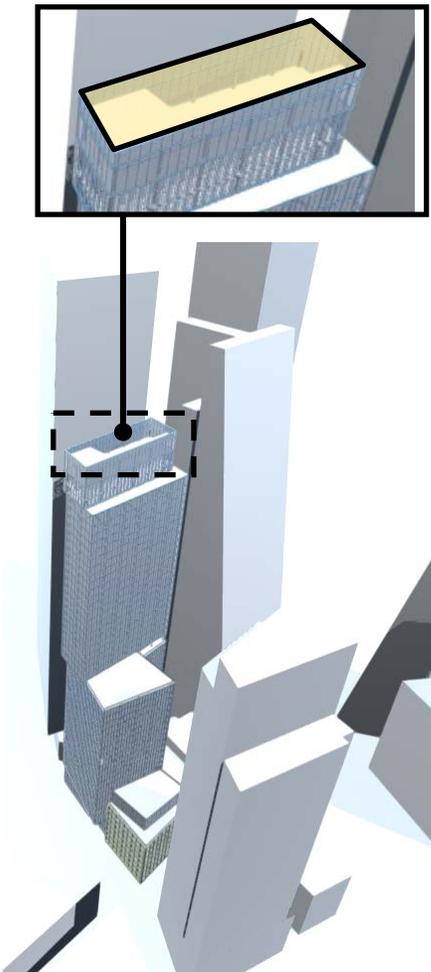

Co-simulation platforms for building performance analyses
