

Bioinclusive lighting

Henrik Clausen, Director Fagerhult Lighting Academy

Bioinclusive Lighting harmonises human lighting needs with ecological sustainability by reducing light pollution's negative impacts on biodiversity and health. It addresses excessive artificial light that disrupts habitats, animal behaviors, and human sleep. By promoting smart, targeted lighting to minimise energy waste and preserve the night sky, Bioinclusive Lighting ensures light is used only where and when needed, creating a sustainable and balanced coexistence between humans and nature.

Join Henrik Clausen, Fagerhult's Director Research & Education, who will be delving into the innovative concept of bioinclusive lighting and the detrimental effects light pollution has on biodiversity and human health, focusing on intelligent lighting solutions and highlighting the importance of minimising environmental disruption.

DETAILS

Date: Wednesday 8th of July

Time: 5pm networking and food/refreshments. 6pm Seminar

Location: Hoare Lea, 4th Floor, 3 Sovereign Square, Sovereign St, Leeds LS1 4ER
